Joanna D. Underwood
President
Energy Vision
138 East 13th Street
New York, NY 10003

Dear Joanna,

On behalf of the Rutgers University EcoComplex, we would like to thank you for the support and dedication that the Energy Vision staff has given to the Renewable Natural Gas (RNG) Work Group. Gail Richardson and you have been leading the charge in developing the RNG Work Group; from conception of the idea, identifying partners, and developing the mission and focus, to Gail's running the meetings as co-chair and leading the communications to all the partners, it is fair to say that the group would not exist without EV leadership. The strengths of Energy Vision complement those of the EcoComplex making for a strong partnership.

As you know, the Rutgers EcoComplex is New Jersey's first environmental research & outreach center serving as a university-based resource hub for the state's environmental & renewable energy industries. Our center focuses on commercialization of new technologies that address pressing environmental & energy issues facing New Jersey and the nation. Because the EcoComplex integrates the best that academia, government, and the private sector have to offer, they are stronger than any one institution can be alone. This pooling of resources and expertise leads to faster, smarter, and more sound solutions to environmental problems.

The RNG Work Group has been a prime example of how cooperation among a very diverse group of industry, government, and academic interests can result in a very effective conduit to benefit our environment, promote renewable energy and create jobs. The work group's focus on renewable natural gas is very timely and appropriate for our region because it uses locally available, low cost, renewable resources and provides fuel for local needs which creates a very sustainable energy solution.

We look forward to continuing our collaboration on the RNG Work Group and look forward to other opportunities to partner with Energy Vision.

Kind regards,

Margaret Brennan-Tonetta
Associate Vice President for Economic Development
Rutgers University

David Specca
Assistant Director for Bioenergy and Controlled Environment Agriculture
Rutgers EcoComplex
