## What is Energy Vision?

Thursday, June 30th, 2011

Automotive Digest Weekly reports that every year, U.S. homes and institutions throw away enough garbage, yard trimmings, farm residues, and other organic waste to make renewable natural gas (referred to as “RNG” or “biomethane”), a clean, petroleum-free fuel that could power millions of the nation’s trucks and buses. Energy Vision, a national non-profit organization, with support from the U.S. Dept. of Energy’s Brookhaven and Argonne national laboratories, has been educating communities and business leaders on the benefits of using this renewable resource. RNG is produced in Europe and used by municipal fleets in a dozen of its cities and it is just emerging in the U.S. According to Energy Vision’s report, Waste to Wheels: Building for Success, communities that are now converting their bus and truck fleets to conventional natural gas for its clean air, fuel security, and fuel cost saving benefits are a step ahead in moving toward use of RNG, since the vehicles and refueling infrastructure are the same for both. To read or download Waste to Wheels, go to [Energy Vision’s website](#).

## Read about Renewable Natural Gas
